SE – Introduction to Web Technologies – HTML and CSS

Session – 3

1. **Create an HTML form for a Flipkart-style product review, including input fields for username, rating (as a dropdown from 1 to 5), and a textarea for the review message. Use appropriate labels for each field.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Product Review Form</title>
</head>
<body>

<h2>Flipkart Product Review</h2>

<form>
    <label for="username">Username:</label><br>
    <input type="text" id="username" name="username"><br><br>

    <label for="rating">Rating:</label><br>
    <select id="rating" name="rating">
        <option>1</option>
        <option>2</option>
        <option>3</option>
        <option>4</option>
        <option>5</option>
    </select><br><br>

    <label for="review">Review:</label><br>
    <textarea id="review" name="review" rows="5" cols="40"></textarea><br><br>

    <input type="submit" value="Submit Review">

</form>

</body>
</html>
```

2. **Add HTML5 validation attributes to your review form so that username is required, rating must be selected, and the review message must be at least 20 characters long.

Hint: Use required, minlength, and a default unselectable option for the dropdown.**

Ans : -

```
<form>

    <label for="username">Username:</label><br>
    <input type="text" id="username" name="username" required><br><br>

    <label for="rating">Rating:</label><br>
    <select id="rating" name="rating" required>
        <option value="" selected disabled>Select Rating</option>
        <option value="1">1</option>
        <option value="2">2</option>
        <option value="3">3</option>
        <option value="4">4</option>
        <option value="5">5</option>
    </select><br><br>

    <label for="review">Review:</label><br>
    <textarea id="review"
              name="review"
              minlength="20"
              required></textarea><br><br>

    <input type="submit" value="Submit Review">

</form>
```

3. **Modify your form to use the POST method and, after submitting a test review, open the DevTools Network tab to preview the POST request data sent by your form.

Hint: Look for the form submission request and expand the payload/details to see your input values.**

Ans : -

```
<form action="#" method="POST">

    <label for="username">Username:</label><br>
    <input type="text" id="username" name="username" required><br><br>

    <label for="rating">Rating:</label><br>
    <select id="rating" name="rating" required>
        <option value="" disabled selected>Select Rating</option>
        <option>1</option>
        <option>2</option>
        <option>3</option>
        <option>4</option>
        <option>5</option>
    </select><br><br>

    <label for="review">Review:</label><br>
```

```
    <textarea id="review" name="review" minlength="20"
required></textarea><br><br>

    <input type="submit" value="Submit Review">

</form>
```

4. **Build a Zomato-style food order form with inputs for user name, a select dropdown for food item (at least 3 options), quantity (number input), and a textarea for delivery instructions. Ensure all fields are labeled and use required validation.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Food Order Form</title>
</head>
<body>

<h2>Zomato Food Order</h2>

<form>

    <label for="name">Name:</label><br>
    <input type="text" id="name" name="name" required><br><br>

    <label for="food">Food Item:</label><br>
    <select id="food" name="food" required>
        <option value="" disabled selected>Select Food</option>
        <option>Pizza</option>
        <option>Burger</option>
        <option>Biryani</option>
    </select><br><br>

    <label for="quantity">Quantity:</label><br>
    <input type="number" id="quantity" name="quantity" min="1"
required><br><br>

    <label for="instructions">Delivery Instructions:</label><br>
    <textarea id="instructions"
              name="instructions"
              rows="4"
              cols="40"
              required></textarea><br><br>

    <input type="submit" value="Place Order">
```

```
</form>

</body>
</html>
```

5. **Add a disabled input field to your food order form that displays a fixed order ID (e.g., ORD12345) and explain in a comment why this field should be disabled for users.**

Ans : -

```
<label for="orderid">Order ID:</label><br>
<input type="text"
       id="orderid"
       name="orderid"
       value="ORD12345"
       disabled><br><br>
```
