SE – Introduction to Web Technologies – HTML and CSS

Session – 5

1. **Create an HTML file for a Flipkart-style product card and apply inline CSS to set a unique background color and font size for the product title only.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Flipkart Product Card</title>
</head>
<body>

<div>
    <h2 style="background-color: lightblue; font-size: 30px;">
        Samsung Galaxy S25
    </h2>

    <p>Price: ₹74,999</p>

    <button>Buy Now</button>
</div>

</body>
</html>
```

2. **Build a Myntra-like offer banner using internal CSS (inside a <style> tag) to set a custom font family, text color, and background color for the banner text.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Myntra Offer Banner</title>

    <style>
        .offer-banner{
            font-family: Arial, sans-serif;
            color: white;
            background-color: deeppink;
            padding: 20px;
            text-align: center;
            font-size: 24px;
        }
```

```
    </style>

</head>
<body>

<div class="offer-banner">
    Flat 50% OFF on Fashion!
</div>

</body>
</html>
```

3. **Create a separate CSS file named styles.css and link it to your HTML file. Use external CSS to style all <button> elements with a Zomato-inspired color, rounded corners, and a hover effect that changes the background color.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Myntra Offer Banner</title>

    <style>
        .offer-banner{
            font-family: Arial, sans-serif;
            color: white;
            background-color: deeppink;
            padding: 20px;
            text-align: center;
            font-size: 24px;
        }
    </style>

</head>
<body>

<div class="offer-banner">
    Flat 50% OFF on Fashion!
</div>

</body>
</html><!DOCTYPE html>
<html>
<head>
    <title>Zomato Buttons</title>
    <link rel="stylesheet" href="styles.css">
</head>
```

```
<body>

<button>Order Now</button>
<button>View Menu</button>

</body>
</html>
```

styles.css :

```
button{
    background-color: #E23744;
    color: white;
    padding: 10px 20px;
    border: none;
    border-radius: 10px;
    cursor: pointer;
}

button:hover{
    background-color: #B71C1C;
}
```

4. **Write CSS selectors to style all elements with the class 'playlist-item' (for a Spotify playlist page) to have a dark background and white text. Then, add a rule to highlight the currently playing song with a different color using a unique id selector.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>Spotify Playlist</title>
    <link rel="stylesheet" href="styles.css">
</head>
<body>

<div class="playlist-item">Believer</div>
<div class="playlist-item" id="playing">Perfect</div>
<div class="playlist-item">Levitating</div>

</body>
</html>
```

styles.css :

```
.playlist-item{
    background-color: #222;
```

```
    color: white;
    padding: 10px;
    margin: 5px;
}

#playing{
    background-color: #1DB954;
    color: black;
}
```

5. **Implement a simple light/dark mode switch for a BookMyShow movie detail page using internal CSS and a toggle button. When the button is clicked, switch between light and dark color themes for the page.

Hint: Use JavaScript to add or remove a 'dark-mode' class on the <body> and define the color themes in CSS.**

Ans : -

```
<!DOCTYPE html>
<html>
<head>
    <title>BookMyShow Movie Page</title>

    <style>

        body{
            background-color: white;
            color: black;
            font-family: Arial;
            transition: 0.3s;
        }

        .dark-mode{
            background-color: #222;
            color: white;
        }

        button{
            padding: 10px 20px;
            margin: 20px;
        }

    </style>

</head>
<body>

<h1>Avengers: Endgame</h1>
```

```
<p>
    A blockbuster superhero movie with action and adventure.
</p>

<button onclick="toggleMode()">
    Toggle Light/Dark Mode
</button>

<script>

function toggleMode(){
    document.body.classList.toggle("dark-mode");
}

</script>

</body>
</html>
```
