SE – Introduction to Web Technologies – HTML and CSS

Session – 8

1. **Create a Flipkart-style product card in HTML and CSS, then use a meta viewport tag to ensure it scales correctly on mobile devices.**

Ans : -

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Flipkart Product Card</title>

    <style>
        body{
            font-family: Arial, sans-serif;
            background:#f1f3f6;
            margin:20px;
        }

        .card{
            display:flex;
            width:600px;
            border:1px solid #ddd;
            background:white;
            padding:20px;
            border-radius:8px;
            gap:20px;
        }

        .card img{
            width:200px;
            height:200px;
        }

        .details h2{
            margin:0;
        }

        .price{
            color:green;
            font-size:22px;
            font-weight:bold;
        }
    </style>
</head>
```

```
<body>

<div class="card">

    <img src="https://via.placeholder.com/200" alt="Product">

    <div class="details">
        <h2>Samsung Galaxy S25</h2>
        <p>Latest smartphone with AMOLED display and powerful processor.</p>
        <p class="price">₹74,999</p>
    </div>

</div>

</body>
</html>
```

2. **Add media queries to your product card so that when the screen width is 600px or less, the card layout switches from horizontal (image and details side by side) to vertical (image on top, details below).**

Ans : -

```
@media only screen and (max-width:600px){

    .card{
        flex-direction:column;
        width:100%;
        text-align:center;
    }

    .card img{
        width:100%;
        height:auto;
    }

}
```

3. **Set up three breakpoints (600px, 900px, 1200px) for your product card and change the card's font size and padding at each breakpoint to improve readability on different devices.

Hint: Use @media only screen and (max-width: ...) in your CSS for each breakpoint.**

Ans : -

```
/* Desktop (1200px and below) */
@media only screen and (max-width:1200px){
```

```
    .card{
        padding:18px;
        font-size:18px;
    }

}

/* Tablet (900px and below) */
@media only screen and (max-width:900px){

    .card{
        padding:15px;
        font-size:16px;
    }

}

/* Mobile (600px and below) */
@media only screen and (max-width:600px){

    .card{
        flex-direction:column;
        padding:10px;
        font-size:14px;
        width:100%;
        text-align:center;
    }

    .card img{
        width:100%;
        height:auto;
    }

}
```

4. **Test your responsive product card by resizing your browser window and taking screenshots at mobile, tablet, and desktop widths; submit the screenshots along with a short note on what changes at each size.**

Ans : -

Screen Size	**Changes Observed**
Desktop (1200px or wider)	Product card displays horizontally with the image on the left, details on the right, larger font size, and more padding.

Screen Size	Changes Observed
Tablet (900px or less)	Font size and padding are slightly reduced, while the layout remains horizontal for better use of space.
Mobile (600px or less)	Product card changes to a vertical layout, the image appears above the details, the card takes the full screen width, and both font size and padding are reduced for easier viewing on small screens.
